The rest of the Diplomas are offer as Own Title

https://en.wikipedia.org/wiki/Own_title

Own title

From Wikipedia, the free encyclopedia

Own title or **Private title** is an academic degree or academic title awarded and accredited by the educational institution that issues it after the successful completion of a course of study of that institution, but is not further regulated.

This term is usually used to refer more specifically to some distinctions of university rank, usually of underdevelopment, whose approval has not been regulated by the government of the country in which the academic institution that emits it is located.

[hide]

Costa Rica[edit]

Diploma of an *Own title* of the Universidad San Juan de la Cruz (In Financial Mathematics) .

The word "University" is not allowed to be freely used by commercial entities, etc. Only institutions established through CONARE [1] (for Public Universities) or CONESUP [2] (for private universities) within the Ministry of Public Education in [3] Costa Rica. For full-time, on-site, Spanish-language studies in Costa Rica, there is the possibility that Costa Rican Universities may request additional approval from CONESUP Programs of study that are not compulsory and

can not be obtained in International study programs, in Line and leave the country in cooperation with other learning providers.
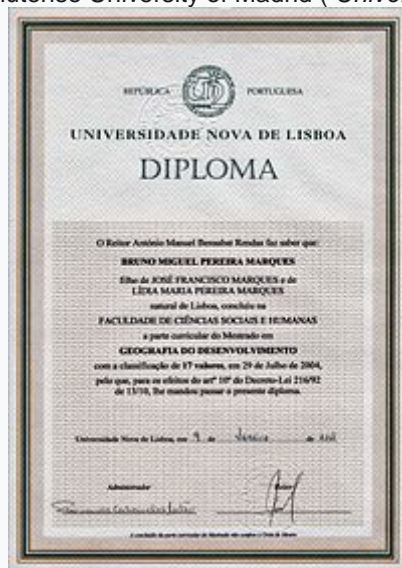

SINAES [4] is a (and not "the") accreditation body of Costa Rica. It is voluntary. Mandatory in Costa Rica is the establishment of a University, either through CONESUP for private universities or CONARE for public universities. SINAES on its website clarifies: To achieve this, University and University degrees voluntarily submit to a rigorous evaluation of their curriculum, faculty and infrastructure, among many other aspects. Costa Rica also prescribes in Article 79 of the Constitution of the Republic that the approved private universities of the country are free to offer Academic Programs (and degrees emanated) without the need for new procedures in case of cooperation with foreign educational providers.

The Ministry of Education in Costa Rica, under the CONESUP brach, explain their system in the next article [5]

=== PhD as own degree === A *PhD* of its own title must overcome a more flexible and diversified internal normative process (in the university itself). Its officiality comes from the guarantee of being a title that has surpassed in turn all the normative and quality controls of a public University.

Diploma of a *Own title* of the Complutense University of Madrid (*University Specialist*).

Example of a diploma from a [Portuguese university] in A4 size paper

SJDLC as established by the [Organic Law of Universities].

=== [Spain] === , in response to the great demand for specialized education of a practical nature in addition to the offer of official higher education, universities and business schools can establish another type Of courses that include masters, diplomas and degrees of expert / specialist, certified by diplomas and own titles, based on internal regulations, unlike university degrees.

Master's degree as a degree[edit]

A ' 'Masters' *of their Own title must overcome a more flexible and diversified internal normative process (in the university itself).* Its officiality comes from the guarantee of being a title that has surpassed in turn all the normative and quality controls of a public university. The regulation, therefore, of this type of own titles is dictated by the educational institutions. However, this type of education is not approved, and therefore can not benefit from agreements or agreements of validation, although in the workplace are equally recognized. Unlike the official master's degrees, the master's degrees themselves are additional non-regulated training programs.

These degrees usually accredit a non-doctoral training process and recognize a qualified level of training higher than that of degree. It is for that reason, that to access to an own masters, of general form, it is necessary to possess the title of Academic Degree or its equivalent in the current degrees (Licentiate, Architect, Engineer), and in certain cases, a Diploma or Engineering. They are designed to offer a type of training according to the demands of society. That is to say, a more flexible and diversified training offering professional, academic or updating of knowledge according to the demands of "Learning à la carte" advocated by the European Higher Education Area.

In order to avoid this ambiguity, in Spain it is usually called an official master's degree or university master's degree to the studies of masters approved according to the [European Space of Higher Education] and own masters to the not further regulated ones.

=== University Diploma === It is very similar to the *University Master's Degree* , But with the difference of having a lower educational load. In some cases, such as the Group of 9 Universities, [6] the subjects taken to obtain the diploma are official subjects of free configuration that, besides allowing to acquire a homogeneous knowledge in a given field through Shared Virtual Campus , Are valid credits and recognized for the students in their official degree degrees or equivalent. In other cases, the subjects studied, as well as the academic content of the courses to obtain the "University Diploma", are independent of the official curricula, and therefore have their own curriculum.

Some of these diplomas are aimed at providing basic knowledge to successfully address the issues of certain types of opposition.

=== University expert === They are oriented to university graduates of first and second cycle and, exceptionally, professionals who meet the minimum requirements of access to official university studies as long as they are professionals directly related to the Specialty of the title itself. They approach subjects in any branch of knowledge with a view to their application in professional activities. The duration of an expert program can be from a few months to a year, that is to say, according to the new credit system its teaching load would be between a minimum of 20 and a maximum of 40 credits.

=== University Specialist === It is very similar to the *University Expert* .

Some universities distinguish them in order to offer programs of the same subject with different level of exigency when it comes to the access.

Thus, to be accepted in a *University Specialist* is sufficient if it meets the requirements of access to the University.

Like the *University Expert* , the *University Specialist* is aimed at professional development and specialization.

Likewise, the duration of this type of postgraduate moves in a wide range, from a minimum of 200 to a maximum of 400 hours.
